

RTD

PROFESSIONAL TRADING DESKTOP

RTD Realtime Trading Desktop (RTD) is RTS' high-performance front-end trading platform used by professional traders around the globe. RTD is the platform of choice, empowering customers to trade multiple asset classes on over 100 markets from a single screen. Engineered to provide a competitive edge, RTD is renowned for speed and reliability.

CORE OFFERING

In addition to the front-end, RTD includes an integrated auto-hedger, multi-layer position and risk management components, high-grade analytics, best in breed trading features as well as integrated charting capabilities. RTD also includes security features that help minimize operational risk. Thus, the core RTD package provides professional traders with a complete set of decision-making components that meets their needs. Further functionality is available with powerful add-ons.

PERFORMANCE

RTD is based on an exchange-independent, client-server architecture which is both scalable and flexible. The communication server forms the core of the system and acts as the interface to RTD and all other RTS software components. This efficient, scalable setup allows for seamless integration of RTD with a variety of other RTS trading solutions.

MULTIPLE ASSET CLASSES

RTD enables users to trade a variety of products and asset classes from a single screen. Futures, options, equities, bonds, FX and commodities can all be traded using RTD's intuitive and feature-rich toolset.

SUPERIOR MARKET ACCESS

RTD can be used to trade on over 100 exchanges and liquidity pools worldwide via RTS' high performance proximity services and Direct Market Access gateways or at the customer's site. Most European and North American Exchanges as well as an increasing number of Asian, Middle Eastern and Latin American Exchanges are already available. RTS also offers access to a network of leading brokers.

POWERFUL TOOLS

In addition to the RTD Realtime Trading Desktop core package, RTS offers a variety of cutting edge automated trading tools. The RTD Quote Machine®, RTD Electronic Eye®, RTD Spreader, RTD Basket Trader® and the RTD Sales Trader provide traders with a competitive edge. Open APIs written in FIX or the RTS proprietary code help you maximize your edge because they promote problem-free development and seamless deployment of your in-house or third party applications.

RTD Quote Machine®

The Quote Machine® is designed especially for market makers active in all asset classes and is compatible with many different quoting styles.

- Simultaneously quote multiple instruments on a variety of markets
- Sophisticated and fast options pricing package
- Rich interface, including extensive volatility models and skew functionality
- Price and trade, both synthetic and exchange-traded, option combinations
- Supported features include exchange mass quoting function, quote request, integrated trade and position management.

RTD IS IDEAL FOR:

- Market Makers
- Hedge Funds
- Investment Banks
- Brokers
- Introducing Brokers (IB's)
- CTA's
- Individual Traders

RTD Electronic Eye®

The RTD Electronic Eye® is designed to be an “eye” on the market and can catch trading opportunities more quickly than the human eye can monitor.

- Configurable electronic eye functionality for automated trading
- Helps capitalize on opportunities in the market before competitors
- Sophisticated options pricing with integrated volatility management

RTD Spreader

The RTD Spreader allows traders to quickly create, manage and execute inter-product, multi-leg and cross-exchange spread trading strategies. Designed to meet the needs of performance-sensitive customers, this automated order management tool's logic is server based. The order generating spreader is as close as possible to the execution venue, giving it a performance edge over desktop based spreaders.

The basic RTD package includes:

- Trading Front-end
- Autohedger
- Position Management
- Risk Management
- Integrated Charting
- Limit Management
- Options Pricing Package

- Multi-exchange spreading
- Intelligent “next generation” multi-leg spreading
- Trade-out functionality
- Integrated spread book
- Reduced legging risk

RTD Basket Trader®

RTD Basket Trader enables traders to trade any number of instruments from different exchanges/marketplaces as a multi-exchange, multi-currency basket.

- Individual basket settings
- Emulate exchange and user defined baskets
- Calculate against any reference contract
- Price modes: last, best bid/ask, middle, market or individual levels
- Features include the Basket Analyzer, the Automatic Basket Hedger and the Rollback function.

RTD Sales Trader

RTD Sales Trader provides brokerage desks with a sophisticated order management solution.

- Efficient and effective care order handling
- Provides an extensive suite of broker functionality
- Enables real-time communication between sales staff, traders and customers
- Allocation and billing of care orders
- Care order warehousing

A variety of automated trading solutions further extend the power of RTD

- RTD Quote Machine®
- RTD Electronic Eye®
- RTD Spreader
- RTD Basket Trader®
- RTD Sales Trader
